

# Safety and Efficacy Are #1

BUT SOME HAND SANITISER PRACTICES MIGHT NOT MEASURE UP

Offering hand sanitiser in your facility helps people feel safe. But common practices could be causing more harm than good. Topping off hand sanitisers might not seem like a big deal, but it can impact the success of your hand hygiene programs – and now the Centers for Disease Control is discouraging the practice.

## SAFETY

Hand sanitiser is a regulated product, with requirements for how formulations are packaged and presented.

Refilling hand sanitisers in dispensers without proper labeling leads to a lack of traceability in the case of a recall. And, topping off sanitiser in bulk fill dispensers can cause inadvertent contamination, according to the CDC.<sup>1</sup>

## IMAGE

Products that have been mixed do not meet the quality experience that visitors expect in away-from-home settings and can lead to uncertainty about the product.

People are sensitive to the feel, scent, and residue left by hand sanitiser and some solutions can leave the impression that the facility is cutting corners or being dishonest.

## EFFICACY

Topping off hand sanitisers in a bulk fill dispenser can increase alcohol evaporation, which could potentially reduce the effectiveness of the formulation, according to the CDC.<sup>1</sup>

Diluted product can affect how much is needed, meaning people may not be using enough hand sanitiser to kill germs as advertised.

## CHOOSING BEST-IN-CLASS PRODUCTS

In public spaces, people expect hand sanitiser to be available. Promote your commitment to well-being and return to high-quality products that are known for great ingredients and a perfectly balanced formula.

The PURELL® brand is universally recognised and trusted as a way to provide safe and effective protection from germs,<sup>2</sup> the PURELL Advanced formulas of hand rub and foam kill 99.99% of most common germs that may be harmful.
